Problem Statement

Making travel plans with a group has always been difficult to coordinate with and a lot of travel memories often get lost in time or are scattered among different platforms.

Objective

- Create Groups for Trips
- Share media in a seperate "memories" section
- **Various categories of trips:**
    - Solo Trip
    - Family Trip
    - Friends Trip
    - Business Trip

where each category will have its own personalised features

Features

- Create Groups and Schedule Trips
- Chat section
  - Budgeting
  - Bucket list
- Memories section
  - Post Pictures
  - Journal/write notes about your Trip
- Annual reminders of past trips
- Book hotels / holiday packages / car rentals.

Techstack

- Frontend
  - html
  - css
  - JavaScript
- Backend
  - Django
- Database
  - MySQL

Techstack

- APIs
    - Travelopros API
    - Google Maps API
    - ActualBudget's Budget API

Future Prospects

Extend to desktop and android/iOS applications.

What have we done till now?

- Created a git repository
- Split the Techstack among ourselves
- Each of us have started learning the basics of our Techstack

Our next step

- Use Figma to design the web application
- Continue learning the basics of the various tech stacks

Thank You!
